

For organisations

Developed to align to organisational objectives, we support healthcare professionals to deliver a clearly defined and measurable improvement in quality whilst saving resources.

By supporting staff to engage with BMJ Quality you can:

- Improve both the quality of your services and the quality of care provided to patients
- Meet revalidation requirements through our exclusive BMJ Learning modules, tools and webinars
- Encourage collaboration. Our platform supports multiple users on specific projects. Users can also add a mentor to support them through their improvement journey
- Project a credible, authoritative and positive message about your organisation through published improvement projects
- Achieve all this without disruption to the day to day running of services

We can help you to achieve this by assisting you in supporting your staff.

To do this we offer:

- A jointly branded BMJ Quality Improvement Programme platform
- A jointly branded mini journal containing all the published projects from your organisation. A great way to show a return on your investment
- Communications to get your staff engaged and to guide them through their quality improvement projects
- Reporting on usage and progress.

Additional support is available for large group purchases.

BMJ Quality

BMJ Quality is an online platform which guides individuals or teams step-by-step through a healthcare improvement project and onto publication by providing the necessary framework and tools to make healthcare improvement simple.

Who is it for?

The healthcare agenda is changing. This means that increasingly doctors, nurses and other healthcare professionals worldwide will be required to engage with activities and projects that improve healthcare and make a real difference to patients.

For example, for the purposes of revalidation doctors in the UK have to demonstrate that they regularly participate in activities that review and evaluate the quality of their work. These quality improvement activities should be robust, systematic and relevant to their role. They should also include an element of evaluation and action, and where possible, demonstrate an outcome or change.

As for junior doctors, quality improvement is superseding clinical audit as a mandatory part of junior doctor training and FY or ARCP requirements.

BMJ Quality provides the expertise and tools to guide users quickly and easily through a healthcare improvement project whilst looking after their development needs along the way.

Benefits of BMJ Quality

- A framework for making improvements to clinical practice
- The opportunity to connect with other users and work collaboratively
- An option to appoint a clinical mentor to specific projects
- Exclusive BMJ Learning modules, tools and webinars which will help users with their project and contribute to their professional development
- The ability to publish completed projects in the online, open access BMJ Quality Improvement Reports journal
- Access to a global improvement community through the 'My Community' area.

The support we offer

The BMJ Quality platform contains exclusive BMJ Learning modules to support project work. These modules can be integrated with BMJ Portfolio which provides an excellent way to keep track of the CME/CPD credits that have been earned.

Users can download or print certificates for modules completed as evidence of CME/CPD points, or for use in an appraisal.

The following BMJ Learning modules are exclusive to BMJ Quality

- Introduction to patient safety
- Systems
- Human factors
- Clinical leadership
- Measurement
- Intervention design
- Stakeholder relations
- Methods for improvement

In addition, users will be presented with case examples, articles and useful tools to help them on their improvement journey.

Get published in BMJ Quality Improvement Reports

Once users have completed a project, they can submit it to be considered for publication in BMJ Quality Improvement Reports journal: an online journal of global improvement evidence.

This journal:

- Is peer reviewed
- Is open access
- Has an international readership
- Aims to help improve healthcare worldwide by building the largest repository of quality improvement projects
- Offers free submission to those who complete a project on the Quality Improvement Programme

Submissions to the journal are via completion of an improvement project using the BMJ Quality platform which has a workbook that is SQUIRE guideline formatted.
